EXAMINER	
WYSZYNSKI, AUBREY H	

ART UNIT	PAPER NUMBER
2134	

MAIL DATE	DELIVERY MODE
06/03/2008	PAPER

Please find below and/or attached an Office communication concerning this application or proceeding.

The time period for reply, if any, is set in the attached communication.

Office Action Summary	Application No.	Applicant(s)	
	10/693,149	HERZ, FREDERICK S. M.	
	Examiner	Art Unit	
	AUBREY H. WYSZYNSKI	2134	

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE *3* MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

1)☒ Responsive to communication(s) filed on *12 May 2008*.

2a)☐ This action is **FINAL**. 2b)☒ This action is non-final.

3)☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

4)☒ Claim(s) *2-14 and 16-21* is/are pending in the application.

4a) Of the above claim(s) _____ is/are withdrawn from consideration.

5)☐ Claim(s) _____ is/are allowed.

6)☒ Claim(s) *2-14 and 16* is/are rejected.

7)☐ Claim(s) _____ is/are objected to.

8)☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

9)☐ The specification is objected to by the Examiner.

10)☒ The drawing(s) filed on *23 October 2003* is/are: a)☒ accepted or b)☐ objected to by the Examiner.

Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).

Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).

11)☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

12)☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).

a)☐ All b)☐ Some * c)☐ None of:

1.☐ Certified copies of the priority documents have been received.

2.☐ Certified copies of the priority documents have been received in Application No. _____.

3.☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

* See the attached detailed Office action for a list of the certified copies not received.

Attachment(s)

1) ☒ Notice of References Cited (PTO-892)
2) ☐ Notice of Draftsperson's Patent Drawing Review (PTO-948)
3) ☐ Information Disclosure Statement(s) (PTO/SB/08) Paper No(s)/Mail Date _____.
4) ☐ Interview Summary (PTO-413) Paper No(s)/Mail Date. _____.
5) ☐ Notice of Informal Patent Application
6) ☐ Other: _____.

DETAILED ACTION

Continued Examination Under 37 CFR 1.114

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 5/12/08 has been entered.

2. Claims 2-14 and 16-21 are pending.

Response to Arguments

3. Applicant's arguments with respect to claims 2-14 and 16-21 have been considered but are moot in view of the new ground(s) of rejection.

Claim Rejections - 35 USC § 112

4. The following is a quotation of the second paragraph of 35 U.S.C. 112:

> The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

5. Claims 2 and 18 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

6. Claims 2 and 18 recites the newly added limitation "the results of pattern matching by analyzing means of other agents". There is insufficient antecedent basis for this limitation in the claim and the limitation is unclear.

Claim Rejections - 35 USC § 103

7. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

> (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

8. Claims 2-14 and 16-21 are rejected under 35 U.S.C. 103(a) as being unpatentable over Rowland, US Patent 6,405,318 and further in view of Baker, US Patent 6,775,657.

Regarding claim 2, Rowland discloses a system that detects the state of a computer network, comprising: agents/host local controller (fig. 9, #151-153) disposed in said computer network, each said agent/host local controller, comprising:
data collection means/intrusion detection system (fig. 1) for passively collecting, monitoring, and aggregating data representative of activities of respective nodes within said computer network (log file auditing, fig. 2, and col. 2 lines 40-47);
means responsive to the data from the data collection means for analyzing said data to develop activity models/user profile data or signatures, representative of activities of said network in a normal state and activities of said network in an abnormal state; and

means for comparing collected data to said activity models to determine the state of said computer network at different times and to dynamically update said activity models (col. 2 . lines 40-67 and fig. 2), wherein said analyzing means performs a pattern analysis on the collected data (fig. 3, #34 and associated text, compares known attack patterns). Rowland lacks or does not expressly disclose said comparing means compares the results of the pattern analysis to the results of pattern matching by analyzing means of other agents to identify similar patterns of suspicious activity in different portions of the computer network. However, Baker discloses comparing means compares the results of the pattern analysis to the results of pattern matching by analyzing means of other agents to identify similar patterns of suspicious activity in different portions of the computer network (figs. 2 & 3 and associated text, disclose intrusion detection pattern analysis performed by a network node and performed by a host node). It would have been obvious to one of ordinary skill in the art at the time the invention was made to modify the system of Rowland with the system of Baker to compare the results of the pattern analysis to the results of pattern matching by analyzing means of other agents to identify similar patterns of suspicious active in different portions of the computer network in order to determine if a specific node can be trusted, as taught by Baker, (col. 5, lines 10-14).

Regarding claim 3, Rowland as modified above discloses the system of claim 2, wherein said agents comprises a plurality of distributed agents/host local controllers and central system controller (fig. 9. #150 and #151-153).

Regarding claim 4, Rowland as modified above discloses the system of claim 2, wherein said data collection means collects data representative of operation of said computer network, including respective nodes in said computer network, said data relating to communications, internal and external accesses, code execution functions, and/or network resource conditions of respective nodes in said computer network (col. 2 lines 40-67, Rowland discloses the system coordinates information transfer with host, multi-host and network environments to coordinate intrusion response...real-time monitoring of log audit files, port scan detection and session monitoring. Fig. 3 demonstrates monitoring foreign domains).

Regarding claim 5, Rowland as modified above discloses the system of claim 2, wherein said activity models characterize conditions within said computer network including behaviors, events, and/or functions of respective nodes of said computer network, said behaviors representative of said normal state and one or more abnormal states representative of suspicious activity in said computer network. (col. 2 lines 40-67 disclose the intrusion detection system automatically and dynamically builds user profile data for each user that can be used to determine normal actions for each user to reduce

the occurrence of false alarms… and fig. 2 shows monitoring suspicious events #15, known attacks, #12, known security violations, #13).

Regarding claim 6, Rowland as modified above discloses the system of claim 2, further comprising means for characterizing the state of the computer network and identifying any potential threats based on said collected data (figs 4-5 disclose the user profile database and user database update function and the anomaly detection function).

Regarding claim 7, Rowland as modified above discloses the system of claim 6, wherein said characterizing means further recommends remedial repair and/or recovery strategies to isolate and/or neutralize the identified potential threats to the computer system (in the event of a detected threat the control is notified, fig. 5, #55, fig. 6, #85, fig. 7, #97; in fig. 8, determine and take appropriate action #127-136).

Regarding claim 8, Rowland as modified above discloses the system of claim 2, wherein respective agents are connected by redundant communications connections (fig. 9).

Regarding claim 9, Rowland as modified above discloses the system of claim 2, wherein each agent is implemented in redundant memory and hardware that is adapted to be insulated from infected components of said computer network (col. 2, lines 48-67).

Regarding claim 10, Rowland as modified above discloses the system of claim 2, wherein the agents a plurality of agents are disposed in a hierarchical structure whereby communications from bottom level agents to agents at higher levels in the hierarchy are limited (fig. 9, local host controller, central system controller, network administrator).

Regarding claim 11, Rowland as modified above discloses the system of claim 2, further comprising means for predictively modeling the behavior of said computer network based on sequentially occurring behavior patterns in the data collected by said data collection means (col. 5, lines 30-35 and figs. 3-4).

Regarding claim 12, Rowland as modified above discloses the system of claim 2, wherein said comparing means comprises means for pattern matching collected data with data in said activity models to determine a closest activity model based upon similarity of the data in each data model with the collected data (col. 5, lines 30-35 and figs. 3-4).

Regarding claim 13, Rowland as modified above discloses the system of claim 2, wherein the collected data represents actions of a virus, system responses to actions of a virus, actions of a hacker, system responses to actions of a hacker, threats directed to discrete objects in said computer network, and/or potential triggers of a virus or threat to said computer network (col. 6, lines 13-col. 7, line 40 and fig. 6).

Regarding claim 14, Rowland as modified above discloses the system of claim 2, wherein said analyzing means for each agent filters and analyzes received data and dynamically redistributes the analyzed and filtered data to other agents associated with said each agent (col. 2, lines 50-66).

Regarding claim 15, Rowland as modified above discloses the system of claim 2, wherein said analyzing means performs a pattern analysis on the collected data and said comparing means compares the results of the pattern analysis to the results of pattern matching by analyzing means of other agents to identify similar patterns of suspicious activity in different portions of the computer network (col. 2, lines 50-66 and col. 5, lines 30-35 and figs. 3-4).

Regarding claim 16, Rowland as modified above discloses the system of claim 2, wherein the comparing means compares names and email addresses in said collected data against known criminal, hoaxsters and/or aliases for known criminals and hoaxsters (col. 10, 27-35 and col. 6, lines 30-51, SMTP).

Regarding claim 17, Rowland as modified above discloses the system of claim 2, further comprising a trusted server that receives attack data from a plurality of agents identifying abnormal states indicative of a network attack, said trusted server gathering the attack data and sending warnings to selected nodes in said computer network (fig. 9, #150, central system controller).

As per claim 18, this is a method version of the claimed system discussed above in claim 1 wherein all claimed limitations have also been addressed and/or cited as set forth above.

Regarding claim 19, Rowland as modified above discloses the method of claim 18, wherein the agents reports any suspicious activity that exceeds a suspicion threshold (fig. 10 controls the intrusion detection system setup and determines the suspicion thresholds).

Regarding claim 20, Rowland as modified above discloses the method of claim 19, wherein the agents transmits said analyzed data in order to determine an origin of the suspicious activity in the computer network (col. 2 lines 40-67).

Regarding claim 21, Rowland as modified above discloses the method of claim 20, further comprising scanning said analyzed data for patterns and comparing said patterns to data representative of patterns of known threats to said computer network for identification of said suspicious activity (col. 5, lines 30-35 and figs. 3-4).

Conclusion

9. Any inquiry concerning this communication or earlier communications from the examiner should be directed to AUBREY H. WYSZYNSKI whose telephone number is

(571)272-8155. The examiner can normally be reached on Monday - Thursday, and alternate Friday's.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Kambiz Zand can be reached on (571)272-3811. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
